### “GUIDELINES FOR RESEARCH PAPER WRITING AND PUBLISHING”

**Introduction:** Writing and trying to publish research and its findings is an integral part of a researcher's professional life. However, writing is not in every researcher's talent pool, and the obstacles of making reviewers accept the own submission are often nerve-wracking. This webinar gives an introductory report on basic issues of writing and organizing scientific papers, and preparing them for submission to a publisher. Additionally, the paper outlines the process of publishing research papers in journals and conference proceedings, aiming to provide interested novices with a helpful guide to paper writing and publishing.

**Objectives:** Research objectives describe concisely what the research is trying to achieve. Summarize the accomplishments a researcher wishes to achieve through the project and provides direction to the study. A research objective must be achievable, i.e., it must be framed keeping in mind the available time, infrastructure required for research, and other resources. Before forming a research objective, we should read about all the developments in our area of research and find gaps in knowledge that need to be addressed. This webinar generally addresses several key points will help come up with suitable objectives for our research projects.
